NOTES
This is a form for DSS members who (or whose households) have moved from one location to another within the NUHDSS. The form is completed at the new residence (entry point).

Overview

ABSTRACT
The Nairobi Urban Health and Demographic Surveillance System (NUHDSS) was set up in 2002 in two Nairobi informal settlements (Korogocho and Viwandani) to provide a platform for investigating linkages between urban poverty, health, and demographic and other socioeconomic outcomes, and to facilitate the evaluation of interventions to improve the wellbeing of the urban poor. All households are visited every four months to collect demographic and health information. The present module refers to 'Changes of residence: Entry Form'.

Units of Analysis

All the households that have a member who (or whose households) have moved from one location to another within the NUHDSS.

Scope

NOTES
This includes the background characteristics of the respondents, previous residence and circumstances of change of residence.

Coverage

GEOGRAPHIC COVERAGE
Two informal settlements (slums) in Nairobi county, Kenya (specifically, Korogocho and Viwandani slums).

UNIVERSE
The survey covered all DSS members who (or whose households) have moved from one location to another within the NUHDSS.

Data Collection Mode

Face-to-face [f2f]

Questionnaires

1. Change of residence entry form

Supervision

Interviewing teams in the two sites of study comprised of:
- Korogocho: 1 field supervisor, 2 editing team leaders, 1 data quality control team leader, 1 deaths' monitoring team leader, 2 data quality control officers, 12 interviewers
- Viwandani: 1 field supervisor, 2 editing team leaders, 1 data quality control team leader, 1 deaths' monitoring team leader, 3 data quality control officers, 17 interviewers

The roles of the various members of the interviewing teams were:
- Interviewer: Conducting face-to-face paper-based interviews (Round 0- Round 38) and using Netbooks (Round 39 onwards) in assigned zone within the study site
- Data Quality Control Officer: Performing random spot-checks on 10% of the questionnaires and reporting inconsistencies to the Data Quality Control Team Leader for harmonization within the study community
- Data Quality Control Team Leader: Harmonizing inconsistencies within questionnaires and performing a random spot-check on 10% of the 10% questionnaires that have already undergone spot-checking
- Editing Team Leader: Editing 100% of questionnaires from randomly selected field workers and documenting issues emerging during data collection
- Field supervisor: Responsible for overseeing general operations, resolving issues that cannot be harmonized by data quality control and ensuring that field work progressed on schedule. They also conducted sit-in interviews along with Data Quality Control Team Leader

The Field Co-ordinator, Research Officer and/or Project Managers visited the field and field teams regularly to monitor and review progress and support field operations.
Data Processing

Data Editing

Data editing took place at a number of stages throughout the processing, including:
1. Quality control through back-checks on 10 percent of completed questionnaires and editing of all completed questionnaires by supervisors and project management staff.
2. A quality control officer performed internal consistency checks for all questionnaires and edited all paper questionnaires coming from the field before their submission for data entry with return of incorrectly filled questionnaires to the field for error-resolution.
3. During data entry, any questionnaires that were found to be inconsistent were returned to the field for resolution.
4. Data cleaning and editing was carried out using STATA Version 13 software.

Detailed documentation of the editing of data can be found in the "Standard Procedures Manual" document provided as an external resource.

Some corrections are made automatically by the program (80%) and the rest by visual control of the questionnaire (20%).

Where changes are made by the program, a cold deck imputation is preferred; where incorrect values are imputed using existing data from another dataset. If cold deck is found to be insufficient, hot deck imputation is used. In this case, a missing value is imputed from a randomly selected similar record in the same dataset.

Other Processing

Data were entered as follows:
1. Typed based on paper questionnaires at APHRC’s headquarters on desktop computers. Double data entry was carried out on 10% of the questionnaires (Round 0- Round 38).
2. Using Netbooks (Round 39 onwards).

In both cases, data were captured using in-house software developed with a Visual Basic. Net front-end and a Microsoft Structured Query Language (SQL) Server back-end.
Data Appraisal

No content available
File Description
Variable List
The file contains data related to the background, the respondent's particulars, previous residence and circumstances of change of residence.

Cases: 182703
Variable(s): 20
Structure:
Type: 
Keys: ()
Version: V1.0

Data are coded as follows:
- Missing Data: No data or a missing data code provided where data should have been collected. All missing values are coded as 9999995 "missing:impute".
- Other-specify: A data code of 7/97/997, et cetera "other" is assigned to any variable where the respondent can provide more specific details about the filter variable.
- Refused: A data code of 7/98/998, et cetera "refused" is assigned to any variable where the respondent refused to answer or participate.
- Don't Know: A data code of 8/98/998, et cetera "don't know" is assigned to any variables where the respondent did not know the answer.
- Skipped Questions: A data code of 9/99/999, et cetera "NIU (not in universe)" is assigned to any variable where the unit (in this case, household) is not in the universe.

**Description**
NUHDSS socialgroup (anonymizer all rounds).

**Universe**
DSS members who (or whose households) have moved from one location to another within the NUHDSS.

**Source of information**
Concatenation of the slum, the enumeration area, the structure number, the room number and the household number

**Literal question**
CURRENT HOUSEHOLD ID.

**Interviewer instructions**
Record the Room Number where the current Household Head sleeps. This is obtained from the number painted on the rentable room where the Household Head usually sleeps. If the Household Head rotates over several rentable rooms, then choose the one where he spends most of his time. Note that although the household may be spread over more than one rentable room, only the Room Number of the Household Head should be recorded here.
